

Complete Cardan Shaft Alignment Fixture System

Cardan Fixtures mounted on the ADVANCED Maintenance Solutions Alignment Simulator

ADVANCED Maintenance Solutions Cardan Alignment System is perfectly suited to accommodate U-Joint drive systems with up to 30" of offset. The system has integrated level vials making measurements very simple. These fixtures are the culmination of 30 years of alignment service experience and can be customized for use with any alignment system on the market. The aluminum construction is very lightweight and rigid. A tool steel laminated back plate helps prevent those errors due to dents and dings. The ADVANCED Maintenance Solutions Cardan Fixtures also have a unique selectable rotating center. Our unique quick release handle allows the adjustment of the fixtures with one hand freeing the other hand for positioning.

All of the ADVANCED Maintenance Solutions Alignment Demonstrators and Fixtures are proudly made in the USA.
